A new unified yet very ancient way of looking at nature and reality may help heal the schism between the domains of science and religion. Insights into the harmonic numerical patterns behind all phenomena may show the way for solving the most difficult problems in not only physics, biology and aesthetics, but also in the foundations of transformative spiritual experiences.

Olsen is writing his second book, "Divine Proportion: The Mathematical Perfection of the Universe." His first book, "The Golden Section: Nature's Greatest Secret," was awarded first place for design by the Bookbinder's Guild of New York in 2007. It is now in eight foreign languages: Greek, Russian, Slovenian, Czech, Norwegian, Chinese, Japanese, and Korean. This visually illustrated talk will also serve as a status report on research findings for his new book.
